## How To Measure Mouldings

In quoting moulding sizes the thickness comes first, for instance, a casing pattern 11/16-inches thick by 2-1/4-inches wide is designated "11/16 x 2-1/4 casing". If length is included it would be listed last, for instance, "a piece of casing 11/16 x 2-1/4 inches x 8 feet". The thickness of a moulding is determined by measuring from the top extremity to the bottom extremity of the piece. Widths also are measured at the widest dimension.
